Introduction

Overview

The eQUEST Building Energy Modeling Guide for LG Multi V provides step-by-step instructions for modeling LG Multi V system. The eQUEST is a building energy use and cost analysis program drawn from the DOE-2.2. The latest version, eQUEST Version 3.65 was built in 2018. Please visit the eQUEST website <http://www.doe2.com/equest/> to download the latest eQUEST and learn more about it.

Disclaimer

This Building Energy Modeling Guide should be used as a guideline only. Building load and energy have been approximated for modeling purposes and vary with the input value of equipment (capacity, power input, etc.), and actual results will vary accordingly. The conclusions of this Modeling Guide do not guarantee actual energy costs or savings.

This Modeling Guide and its associated eQUEST library file are intended as design and analysis guides to help designers optimize the design of LG Multi V VRF systems based on energy utilization. Modeling accuracy is highly dependent on user-supplied data. It is the user's responsibility to understand how the data entered affects program output and any predefined libraries are used only as guidelines for entering that data. The calculation results and reports shown in this guide and the eQUEST library file are meant to aid the system designer and are not a substitute for design services, judgment, or experience.

Program Installation

How to install eQUEST:

1. Download the latest version, eQUEST Version 3.65 from the DOE-2 Website <http://doe2.com/equest/index.html>.
2. Save the downloaded file (.msi) to your preferred location.
3. Double click the downloaded file (.msi) to run the installation.
4. Follow the program prompts to finish the installation using the default settings.

Importing Multi V Library File

Importing the Library File

This section shows how to replace the default library file in eQUEST with the LG Multi V library file.

How to import the Multi V library file into eQUEST:

1. Obtain the LG Multi V library file (Bdllib.dat) from your LG Sales Representative.
2. Double click the eQUEST on your desktop to open the program. The eQUEST Startup Options dialog box appears:

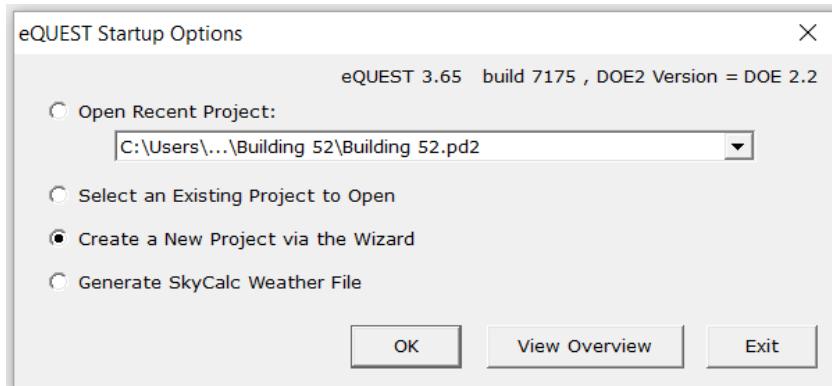

Figure 1: eQUEST Startup Options

Note: If you are an experienced user of eQUEST, open an existing project.

3. Click the **OK** button to create a new project. The Which Wizard dialog box appears:

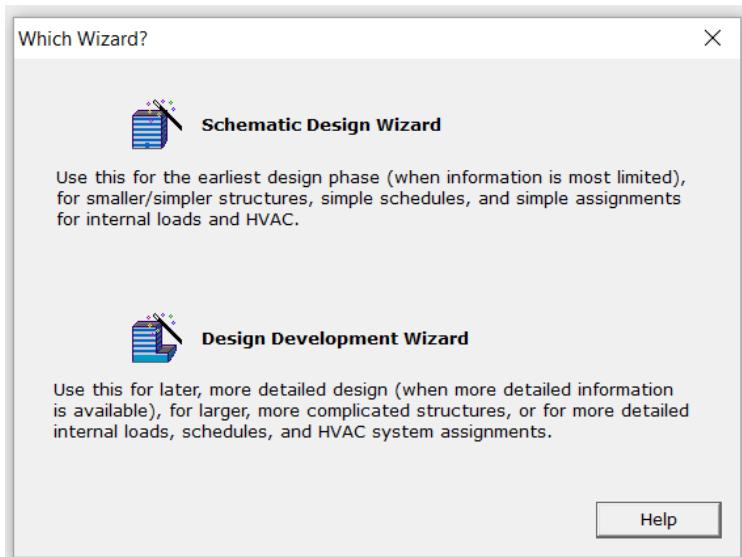

Figure 2: Which Wizard

4. Click the **Schematic Design Wizard** button.
5. When the Wizard appears, click the **Finish** button. The Wizard closes.
6. Click **Tools > View File Locations > View eQUEST Data Directory**. The eQUEST Data Directory opens in new window.

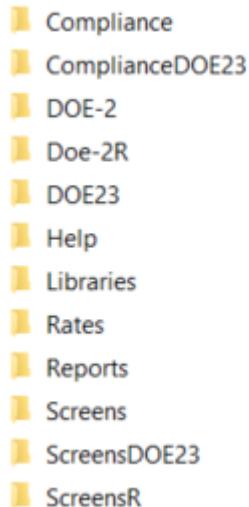

Figure 3: eQUEST Data Directory

Due to our policy of continuous product innovation, some specifications may change without notification
©LG Electronics U.S.A., Inc., Englewood Cliffs, NJ. All rights reserved. "LG" is a registered trademark of LG Corp.

7. Double click the DOE-2 folder. A list of files appears:

- Bdldft.dat
- BDLDFT
- BDLKEY.BIN
- BDLKEY.OUT
- BDLLIB.BIN
- Bdllib.dat
- eQ_Lib.dat
- HDRFIL.BIN
- HDRFILOUT

Figure 4: DOE-2 Folder

8. Rename the **Bdllib.dat** file to **original_Bdllib.dat**, so you can return to the default file if necessary.
9. Copy the LG Multi V library file (Bdllib.dat) and paste it to the DOE-2 folder.
10. Close the DOE-2 folder.
11. In eQUEST, click **File > Exit** to close the program.

Testing the Library File

How to test the Multi V library file in eQUEST:

1. Double click the eQUEST on your desktop to open the program.
2. Click **Mode > Detailed Data Edit**.
3. Click the **Air-Side HVAC** button from the top navigation bar.
4. Right click the **Performance Curves** folder in the Component Tree and click **Create Curve Fit**. The Create Curve Fit dialog box appears:

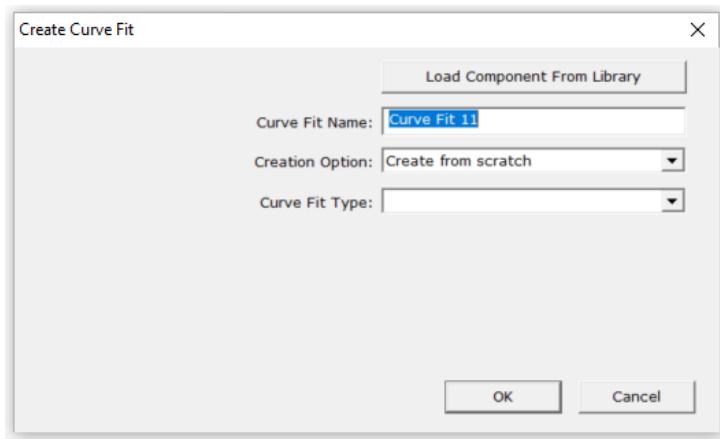

Figure 5: Create Curve Fit

5. Click the **Load Component from Library** button. The Curve Fit Library Selection appears:

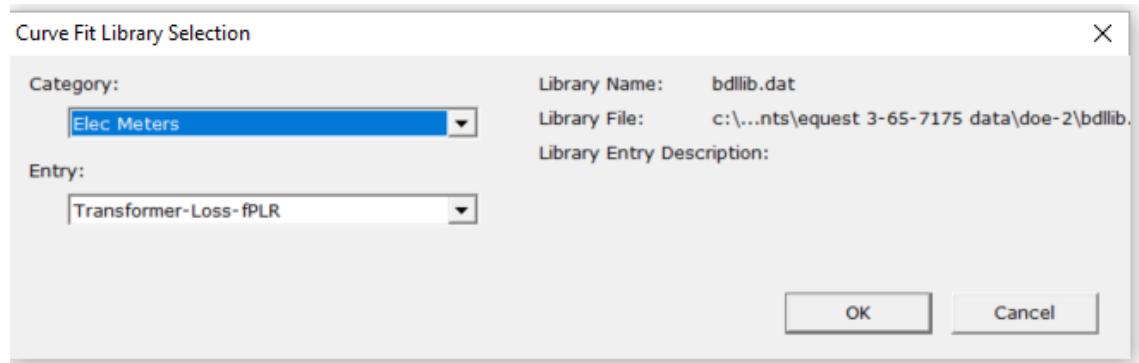

Figure 6: Curve Fit Library Selection

Due to our policy of continuous product innovation, some specifications may change without notification
©LG Electronics U.S.A., Inc., Englewood Cliffs, NJ. All rights reserved. "LG" is a registered trademark of LG Corp.

6. Select **Multi V 5 (HP)** in the **Category** and an applicable LG Multi V 5 Outdoor Unit in the **Entry** and click the **OK** button.
7. Click the **OK** button on the Create Curve Fit window.
8. Click the **Done** button on the Performance Curve Properties window. The LG Multi V 5 Outdoor Unit appears under the Performance Curves in the Component Tree.
